Ambitious Business Technology student at Manchester Metropolitan University with experience in Javascript development.

## Experience

SOFTWARE DEVELOPER AND GRAPHIC DESIGNER Freelance

September 2021 – Present

I have worked on a number of small projects, developing software, web applications and brand identities.

Through creativity, consideration for UI/UX principles, and with frameworks like React and Next.js, I developed the front-end for these projects. When developing back-end solutions, I often used Express.js, GraphQL, MongoDB and Docker. I also utilised ESLint, GitHub Actions and JEST to ensure my codebase was reliable, readable and up to industry standards.

Some of the projects were deployed on AWS and similar cloud providers (such as [fly.io](#)). I'm particularly interested in the Jamstack and working with, as well as developing, serverless technologies.

PENSIONS CASEWORKER Capita Plc. (PCSE, NHS Business Services Authority)

June 2021 – August 2021

While Capita was undergoing a digital transformation, I was recruited on one of the teams which ensured minimised disruption caused by the transition from legacy systems. I processed financial information about clients' pensions, maintaining accuracy, investigating complex cases, communicating outcomes to clients and resolving inconsistencies in data.

OUTBOUND CALL AGENT Capita Plc. (NHS Test and Trace)

May 2020 – August 2020

I was part of the Government's early response to the pandemic as one of the first employees hired by the NHS Test and Trace programme. I worked in a contact tracing team which reached out to people who had been in contact with patients with a confirmed Coronavirus infection and provided them with the appropriate guidance and support. As this was an outbound call role, it required a high degree of patience and resilience, as well as sympathy and understanding for the patients.

## Education

### MANCHESTER METROPOLITAN UNIVERSITY

BSc (Hons.) in Business Technology

Commencing in September 2022.  
Expected completion in 2025.
